

# Are YOU at risk for a HEART ATTACK?

*Schedule your Cardiac Calcium Score test to find out!*

## Cardiac Calcium Scoring is...

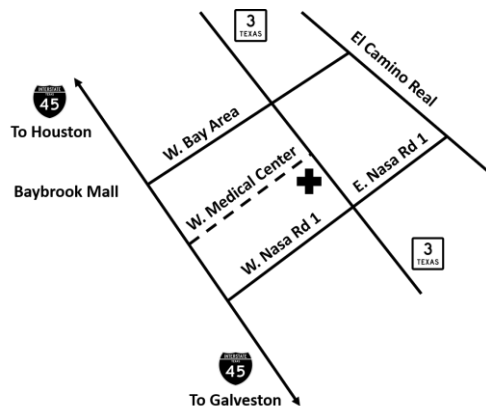

An inexpensive, painless, non-invasive test that takes less than 30 seconds on a CT scanner. The resulting score indicates the level of plaque build-up in your arteries.

## Your score is important because...

Heart disease is the leading cause of death for men and women. Knowing your score provides an opportunity to make life-saving changes before a cardiac event occurs.

Men over 40 & women over 50 should be tested, if they have any of these risk factors:

- Smoker
- High Cholesterol
- High Blood Pressure
- Overweight or Obesity
- Diabetes
- Inactive lifestyle
- Family History of Heart Disease
